

What's New in CALCMENU 2006 v7.1

CALCMENU 2006 is continuously being developed to provide enhancements to existing functions and EGS added new features for better recipe management.

Enhancements and Modifications in v7.1 Database Version 38937

New Simpler Set of Icons

- A new look of icons is one of the latest changes in version 7.1. **Use simplified icons in toolbars** is found under the **Default** tab in **Options and Preferences**. User should select the corresponding checkbox to see the simplified buttons in all toolbars of the program. The new set of icons will be simpler, for the user to be more familiarized with its appearance and its functions.

Software Activation System

- EGS recently added a Software Activation System for security purposes of its products. After logging in to the CALCMENU program, a dialog box will appear. This is the **EGS Product Activation** dialog box that needs to be registered to prevent software piracy.

Merchandise List

- A new button, **Import Merchandise**, was added to the Merchandise List form. This is the same as the one under *Tools > Import Merchandise*.

Recipe & Menu

- Added **Info** tab for Recipes. Users can now type the Preparation and Cooking Tip/Advise for recipes. Users should take note that Preparation is different from the Procedure.
 - Added checkbox option to **Display Ingredient Label of Merchandise in Declaration** tab for Recipes. This feature automatically displays the recipe's ingredients in the **Composition** input box when **Refresh** button is clicked. With this feature, users can prevent manually typing all the ingredients included in the recipe.
 - Increased the procedure length for Recipes and Menus to 4000 characters (*before it was only 2000 characters*).
-

Configuration

Options & Preferences

Import Tab

New feature **Windows Settings** was added as default value for the Importation Configuration. This option will automatically use the local setting of windows when importing file.

Supplier

- New feature **Import from Supplier** option was added under Supplier menu options. This option will make Supplier Network importation as its default when importing suppliers' products.

Removed limitations between CALCMENU Editions

Removed differences on the following features in CALCMENU Editions:

- Enabled Log for CALCMENU Pro
 - Enabled Labor Cost for CALCMENU Pro
 - Enabled Nutrient Rules for CALCMENU Pro
 - Enabled Translation for CALCMENU Pro
 - Removed limitation on number of currencies for CALCMENU Pro
 - Removed limitation on number of meals in the Menu Plan for CALCMENU Pro.
 - Removed limitation on the number of keyword groups for CALCMENU Pro.
-

What's New in F&B Control v7.1

F&B Control is continuously being developed to provide enhancements to existing functions and EGS added new features for better inventory operations and transaction management.

Enhancements and Modifications in v7.1 Database Version 38937

Software Activation System

- EGS recently added a Software Activation System for security purposes of its products. After logging in to the F&B Control program, a dialog box will appear. This is the **EGS Product Activation** dialog box that needs to be registered to prevent software piracy.

Automatic Output Improvement

- A new and improved Automatic Output procedure is one of the highlights of version 7.1. In the previous versions, the user usually had a hard time outputting items due to encountered general errors and complicated procedures. But, with the latest one, the user may find it easier with the way the program will handle and evaluate the errors. A warning icon will now replace the previous icons, and a more detailed reason why an item cannot be outputted will be listed in the smaller grid when the user selects an item. To solve the errors, a **Resolve errors** button was added in the form. This button will help the user fix the problem in a very easy way.

Inventory

- Two new buttons were added in Inventory. These two new features are **Send Data to Excel** and **Update from Excel**. Their function is to exchange F&B Control Inventory details with Excel.

Input/Output/Transfer

- The use of Scanpal feature has been a huge help for users who deal with the likes of Inventory, Barcode, Requisition, Receiving, etc. With the latest version, users can now make use of ScanPal interfacing for Manual Transfer under Input/Output/Transfer. The program will still have the same procedure in getting quantity that will be transferred from the information recorded in ScanPal.
-

History

- Added a new column under **Delivery Receipts** tab and **Internal Transfer** tab. This new column will display the Delivery Receipts Transaction number and Internal Transfer Transaction number. With this new column, the user can now easily distinguish the transaction of each item.

Manage Users

- Added a new right to **View/Modify all Transfer Request** under the Part 3 tab of the Rights list display. If this new right feature is selected, Normal users will have the right to view, modify, and print Internal Transfer Requests from Transfer Request List form and Transfer Receiving form.

Configuration

Options & Preferences

Import Tab

New feature **Windows Settings** was added as default value for the Importation Configuration. This option will automatically use the local setting of windows when importing file.
